**Hörmann BiSecur**  
*The modern radio system for garage door operators*

# Roller Garage Door RollMatic

More free space in the garage with innovative Hörmann technology

# Hörmann Brand Quality

For the best safety and reliability

**“A good reputation must be earned.”** (August Hörmann)

In line with the founder’s philosophy, the Hörmann brand today is a true promise of quality. The family-owned company has over 75 years of experience in door and operator construction and with sales of over 20 million doors, is no. 1 in Europe. This gives you a reassuring feeling when purchasing a Hörmann roller garage door.

## Made in Germany

All door and operator components are developed and manufactured by Hörmann. Our highly qualified employees work intensively on new products, continual further developments and improvement to details. The results are patents and one-of-a-kind products you can depend on. Endurance tests under real conditions ensure mature series products with Hörmann quality.

## An eye on the future

Hörmann is setting a good example. This is why, from 2013 onwards, the company will obtain up to 40 % of its required energy from green sources and will continue to increase this percentage. At the same time, many tonnes of CO<sub>2</sub> are saved each year thanks to the introduction of an intelligent and certified energy management system. And last but not least, Hörmann also offers products for sustainable construction.

## Certified brand quality

At Hörmann, doors and operators are perfectly matched to each other and approved and certified by independent established institutes for your safety. They are manufactured in Germany according to the DIN EN 9001 quality management system and fulfil all the requirements of European standard 13241-1.

## Long-term performance

Thanks to excellent technical solutions and uncompromising quality assurance, you receive a 10-year warranty on all RollMatic roller garage doors and 5 years on all Hörmann operators.

\* The complete warranty conditions can be found at: [www.hoermann.com](http://www.hoermann.com)

# Good Reasons for a Roller Garage Door

## Convincing in terms of function and appearance

### Maximum space in front of and in the garage

#### Space-saving design

RollMatic roller garage doors open vertically and require minimum space inside the garage. The door's design offers maximum space inside and in front of the garage.

The ceiling also remains free and can be used for lamps or as an additional storage space.

#### Ideal for modernisation

The shape of the garage door opening is not of prime importance for roller garage doors. Whether square, angled, with segmental or full centred arch:

**A Hörmann RollMatic roller door always fits.**

### External roller garage doors // *NEW* With a lack of interior sideroom

#### Fitting in front of the opening

The RollMatic is also available as an external roller garage door for fitting in front of the opening if your garage has little lintel space and / or sideroom.

The external roller garage door is supplied as a complete package with a matching operator. The shaft cover around the operator protects it from adverse weather effects and unauthorised interference.

The shaft cover and frame come in the same colour as the door to create a uniform and harmonious appearance.

In the external roller garage door, the aluminium tension spring cover on the sides has vision sections so you can check the spring system.

# Good Reasons to Try Hörmann

The market leader has all the innovations

# 1

## Reliable and safe: the tension spring assembly

### Convincing technology

The tested tension spring assembly supports the operator during the opening and closing of the door. This protects the operator mechanism and in case of an emergency, the door can be easily opened by hand. A crank handle is not necessary. Double cabling additionally protects the door from crashing to the floor.

The special profile arrangement at the shaft guarantees a secure, break-in resistant locking. With this mechanism, it is practically impossible to push the curtain open.

# 2

## Maintenance-friendly and especially quiet

### Operator included as standard

The operator is located outside the shaft cover for trouble-free maintenance. Start and stop of the RollMatic door are particularly soft and silent, preserving the door. The spring compensation and reliable automatic cut-out render an additional closing edge safety device unnecessary. An internal push button and light are already integrated in the control housing.

# Elegant Appearance

Design possibilities for RollMatic roller garage doors

▲ Outside view of the door curtain ▼ Inside view and outside view of external roller garage doors

### Smooth surface

The smooth surface of the aluminium profiles looks modern and elegant, unlike ribbed profiles from other suppliers. The smooth surface is also easy to clean. The high-quality coating of the door's exterior and interior provides weatherproof long-lasting colour freshness.

### Profile with thermal insulation

The hollow space of the profile is evenly filled with polyurethane rigid foam for quiet door travel.

### Glazing elements

Get more light in your garage! The glazing elements with synthetic panes are arranged across the entire profile width. The number of elements depends on the respective door width. A maximum of ten profiles can be fitted with glazings in each door.

### Ventilation grilles

Ventilation of your garage improves the room climate and prevents mould. Ventilation grilles made of long-lasting plastic are arranged across the entire profile width. A maximum of ten profiles can be used for each door.

# Simply Beautiful

Colours and surfaces – Let your taste decide

RollMatic with Decograin surface Golden Oak

**You can choose between 9 equally-priced colours and two attractive Decograin surfaces**

Traffic white	RAL 9016
Light grey	RAL 7035
White aluminium	RAL 9006
Steel blue	RAL 5011
Moss green	RAL 6005
Ruby red	RAL 3003
Terra brown	RAL 8028
Anthracite grey	RAL 7016
Jet black	RAL 9005

RollMatic roller garage doors from Hörmann are delivered in Traffic white as standard, in addition there are 8 preferred colours available without a surcharge.

Decograin Golden Oak  
Medium-brown, golden yellow oak design

Decograin Rosewood  
Mahogany-coloured timber design

#### **Decograin surfaces with a distinguished timber look**

The two Decograin surfaces in the colours Golden Oak and Rosewood have a convincingly real timber look. A special surface protection preserves the UV-resistant plastic film coating on the RollMatic over a long time. Decograin surfaces are not available for external roller garage doors.

#### **Harmonious overall appearance**

Only Hörmann offers you the complete door in the selected door colour without a surcharge. The door curtain, guide rails, fascia panel and shaft cover are thus combined in an attractive and harmonious unit.

The inside of Decograin doors (door curtain, guide rails and shaft cover) is painted in brown.

The colours and surfaces shown are subject to the limitations of the printing process and cannot be regarded as binding. Please consult with your local Hörmann specialised dealer.

# RollMatic External Roller Garage Door

The solution for areas with a lack of interior sideroom

## **When there is not enough space in the garage**

A RollMatic external roller garage door for fitting in front of the opening is the right solution for garages with low headroom and / or sideroom.

The external roller garage door is always supplied as a complete package with a matching operator.

To create a uniform and harmonious appearance, the shaft cover and frame are in the same colour as the door curtain.

### Variable operator positions

1 Depending on the fitting situation, operators for external roller garage doors can either be installed on the left or right. The shaft cover is 100 wider in this area and encloses the operator, protecting it from adverse weather effects or from unauthorised interference.

### Tension spring cladding with vision sections

2 You can easily check whether the cable guide or springs are working through the vision sections in the spring cladding, providing you with safety even after many years.

### Secured release on inside

3 The operator can be easily released from the inside using a hand pulley. You can, for example, easily open your door by hand from the inside during a power failure.

## Variants and Optional Extras

### **Matching side door**

A practical side door is a convenient way to access your garage. Matching the RollMatic, side doors are supplied with a corner frame and slim frame in the same design as the side doors for up-and-over garage doors.

## Manually operated door

### Easy manual opening

Thanks to the supporting tension spring compensation, Hörmann roller garage doors are easy to manually open and close from the outside of the garage using the handle **1** and from the inside with the pull chain **2**.

### Manual door locking

The manually operated roller garage door is mechanically locked using interior and exterior handles and a lock. Solid metal bolts extend on the right and left into the door frame **2**.

## Chamfered bottom profile

The solution for sloping ground: An aluminium chamfered bottom weather seal compensates for differences in height over the entire door width of up to 300 mm. The profile can be fitted without any difficulty and is simply screwed onto the inserted curtain.

The bottom profile is delivered powder-coated in Jet black (similar to RAL 9005). On request, the bottom profile (as shown) is also available in a colour matching the door colour.

## Additional fascia panel

The additional fascia panel stabilises the fascia panel during fitting in the opening and harmoniously covers the lintel without any unattractive fitting holes. The additional fascia panel is available in the colour of the door or with a Decograin surface **3**.

## Fitting compensation set

The optional compensation set ensures a flush-fitting installation of the door in uneven walls **4**. For more information, consult the technical manual.

# Convincing Technology

Details perfectly matched to each other

## Easy to fit

RollMatic roller garage doors are quickly and simply fitted. The side guides, lintel bracket and operator are bolted to the garage walls and lintel. Subsequently, the curtain is pulled effortlessly from the operator onto the shaft and fixed via belts. There is no need for extensive adjustment.

## Tension spring technology with spring-in-spring system

**1** Hörmann RollMatic roller garage doors with double tension springs and double cabling protect the door leaf from crashing in every door position. The patented multi-spring system and the transparent protective cover prevent broken springs from flying out and thus protect from personal injury.

## A well protected shaft

**2** The standard shaft cover practically prevents reaching into the door barrel. In addition, it protects the curtain from damage and dirt when the door is open. The cover is supplied in the colour of the door or in brown with Decograin surfaces.

## Integrated mechanical door security kit

**3** The special section positioning at the shaft as well as the connection to the operator protect the RollMatic roller garage door from being pushed open forcefully from the outside. This makes burglary attempts much more difficult. Of course, manual opening from the inside is possible in emergencies.

## Wear-resistant bearing rings // NEW

**4** The newly developed bearing rings made of various plastics reduce wear when the curtain is rolled up and down. This keeps the surface of the door curtain beautiful for a long period of time. The bearing rings also dampen noise and help the door to close better.

## Wind locks as standard

**5** Hörmann's RollMatic roller garage doors can even withstand large wind loads (up to class 5). The wind locks fitted as standard in the profile ends keep the door securely within its guides. An additional advantage is increased protection from burglary.

**Only from Hörmann**

## Tested and certified

The newly developed, extremely secure BiSecur encryption protocol makes sure that no-one can copy your radio signal. It has been tested and certified by security experts at the Bochum University and has the same high security level as online banking.

reddot design award  
honourable mention 2011

## Award-winning design

The new, exclusive BiSecur hand transmitters are set apart by their high-gloss surface in a piano lacquer look, as well as by an elegant shape that fits easily in the palm of your hand. The figure on the left shows an HS 4 BS hand transmitter with optional hand transmitter station.

Hörmann's BiSecur hand transmitters have been awarded a design prize by an international jury.

Please see the following page for more information on the hand transmitters and other control elements. The complete range of accessories can be found in Hörmann's specialised brochure on garage door and entrance gate operators and at [www.hormann.co.uk](http://www.hormann.co.uk).

# Door, Operator and Control

## An optimally matched system

### Approved as a functioning unit

In RollMatic roller garage doors, the door components, operator and control are optimally adjusted to each other and approved as a functioning unit.

The integrated soft start and soft stop of the operator ensures smooth door travel and protects the door. The accessible operator housing facilitates easy maintenance.

The control is complete and equipped with a button and a light.

### Standard emergency release

Standard emergency release via a pull cord: The door can be easily pushed open after pulling the cord and does not have to be cranked open.

### Reliable automatic safety cut-out

The automatic safety cut-out secures the closing edge and immediately stops the door if there is an obstacle. This way an additional closing edge safety device can be omitted.

### As standard:

- Impulse control with integrated lighting
- Two 2-button hand transmitters HSE 2 BS (black)
- Automatic safety cut-out with obstacle detection
- Emergency release from the inside via a pull cord
- Mechanical anti-lift kit
- Crash safety through tension spring assembly

More control elements and the complete range of accessories can be found in Hörmann's specialised brochure on garage door and entrance gate operators and at [www.hormann.co.uk](http://www.hormann.co.uk).

## Quality accessories for added security

**Radio code switch  
FCT 3 BS // NEW**  
For 3 functions,  
with illuminated buttons

**Radio code switch  
FCT 10 BS // NEW**  
For 10 functions,  
with illuminated buttons  
and protective cover

**Radio finger-scan  
FFL 12 BS // NEW**  
For 2 functions  
and up to 12 finger prints

**Key switch**  
For 1 function, in a recessed  
version (shown) and surface-  
mounted version, including  
3 keys.

Operation of the automatic  
wicket door function is  
possible with an optional  
second microswitch.

**Optional emergency release from the outside**  
For garages without a second access, we offer  
you the option of opening the door from the outside  
in case of emergency (e.g. power failure).

**Acoustic alarm**  
To complement the mechanical arrestor kit, Hörmann  
optionally offers you an acoustic alarm. The shrill alarm  
sound with a volume of 110 db (A), equal to a siren 10 m  
away, effectively deters burglars.

**The emergency battery**  
With this emergency power supply, you can bypass  
network power failures for up to 18 hours and  
max. 5 door cycles. The emergency battery recharges  
itself during normal operation.

# Roller Garage Door Fitting Dimensions

## RollMatic roller garage door incl. operator

Internal roller garage door: Fitting behind the opening, view of fitting side

Internal roller garage door: Fitting in the opening, interior view

Size range for internal and external roller garage door

**External roller garage door: Fitting in front of the opening, view of fitting side**

**Explanation of dimensions**

- LB Clear width = ordering size
- LH Clear height = ordering size
- LD Clear passage
- EBT Fitting depth
- SBD Required headroom

**Fitting depth EBT**

- Up to 2300 mm door height 290 mm
- From 2301 mm door height 335 mm

**Required headroom SBD**

- Up to 2300 mm door height 290 mm
- From 2301 mm door height 335 mm

**Clear passage LD**

- Height (with operator) LH - 60 mm
- Height (manually operated) LH - 125 mm
- Width LB

**Side space requirement**

- 100 mm
- External roller garage door operator side 200 mm

**Wind load classes**

- Up to door widths of 3500 mm Class 5
- Up to door widths of 4500 mm Class 4
- Up to door widths of 5000 mm Class 3

**X External roller garage door cladding**

A symmetrical arrangement is also possible, in addition to a variable operator position (as standard on left, optionally on right) with projection of the shaft cover on the operator side.
